

Rapidh₂O™

OIL SPILL RESPONSE

Endorsed by USA Spill Response Expert as a next-generation spill response tool, it is deemed essential for inclusion in every response plan, trainer, and training program.

- Oil Industry endorsed and Patented
- Rapid deployment and tear down compared to other types of portable liquid storage tanks
- Cost effective Rapid Response & Reusable many times
- Shoreline barrier protection during an oil spill response
- Temporary storage of hazmat liquid storage & containment during emergencies
- Temporary storage of oil absorbents or other contaminated solids
- Oil spill decontamination and cleaning of equipment
- Each section when flat packed is under 6" high & 39" square but deploys to hold 1300 gallons of liquid in minutes
- Flat packed for simple storage & transportation
- Excellent for remote areas or delivering by vessel, boat, helicopter and ATV
- So well made & robust that Rapid-H2O has passed Florida hurricane weather testing
- Test reports and videos available at innovativeglobal.net

The Rapid H2o: is an advanced solution intricately designed to confine and store oil in spill scenarios, mitigating environmental impact to the maximum extent.

It distinguishes itself as the exclusive emergency spill response tool proficient in both containment and storage of spilled products.

Oil spill response drills are like rehearsals for a play— They help teams practice and refine their strategies to efficiently handle potential oil spills.

When a spill occurs, the initial step is to shield the vulnerable areas.

The reality is that by the time spills occur, many areas have already felt the impact. This shifts the focus to a different aspect, emphasizing the need for training that covers every angle of the spill drill setup. With various dimensions to consider, comprehensive training becomes essential to tackle spills effectively from all perspectives.

On the other hand, actual oil spills are the live performances, where the skills and plans from those drills are put to the test in real-world scenarios.

The current state of beach response and containment methods highlights a need for improvements.

The Rapid H2O represents the next generation in containment with its advanced features:

- Storage
- Barrier
- Wall
- Fence

In the realm of spill containment and storage solutions, The **Rapid H2O** stands alone as the exclusive system available on the market.

The Rapid H2O represents the next generation of storage for a spilled product

**Rapid H2O is a
containment and storage
tool**

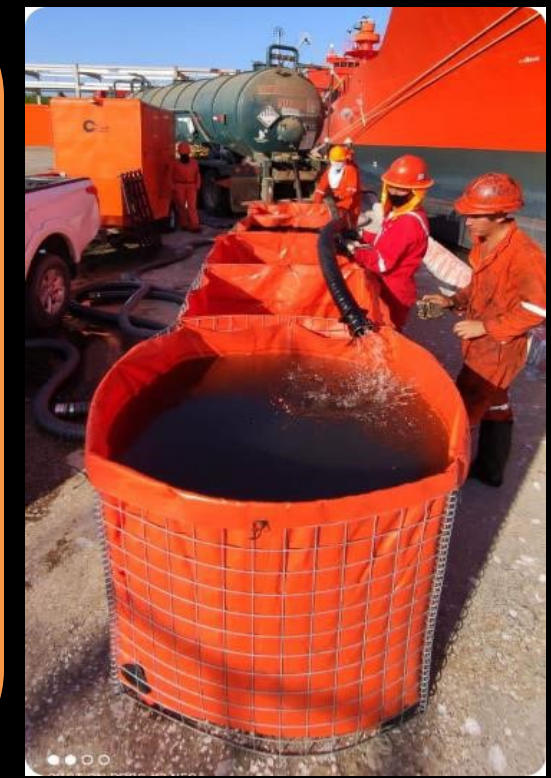

Rapid H2O Replaces

While Lessing logistic, equipment, labor and cost Rapid H2O provides speed

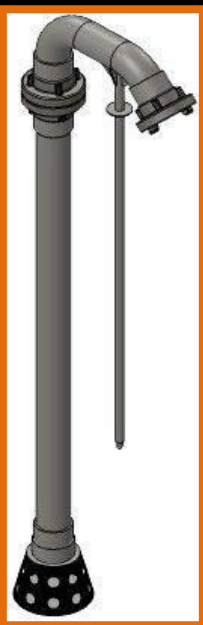

The Rapid H2O storage and containment system can be an unlimited storage space.

Rapid H2O's Containment System is designed to adapt to various scenarios, making it highly versatile for different types of spills or emergencies whether it's containing oil spills on a long stretch of beach or hazardous material in isolated areas, Rapid H2O proves to be an invaluable asset.

There is no other oil spill response tool worldwide that possess the capability to both contain and store a spilled product.

This totally unique rapid response multi-use system has been endorsed by oil spill and emergency response experts with years of experience.

Rapid-AS-24

Introducing our cutting-edge product, the Adjustable Skimmer for spilled substances.

The AS-24 is Designed for effortless filling the Rapid H2o by way of pump, this suction skimmer boasts adjustable features and a variety of flanges, ensuring seamless compatibility for a range of applications.

When responding to beach spills elevate your spill containment game with innovation and versatility—choose the Adjustable Skimmer and the Rapid H2o for a smarter, more efficient solution.
